PROFESSIONAL SUMMARY

Software Engineer with experience in application production support, incident management, Python automation, and full-stack development. Skilled in monitoring and troubleshooting enterprise systems, REST APIs, and data-driven dashboards. Seeking to contribute to reliable operations, automation, and analytics in a dynamic technology environment.

TECHNICAL SKILLS

Monitoring & Operations: Dynatrace, Incident Management, Root-Cause Analysis, Production Support, JIRA, Jenkins, Linux

Development Tools: VS Code, Google Colab, Microsoft Excel/Office, Power BI, Git, GitHub Actions

Cloud & DevOps: Amazon EKS, Kubernetes, Docker, Terraform, ArgoCD, Helm, IBM Cloud

Technologies/Platform: MongoDB, SQLite, Hugging Face, XGBoost

Software Architecture: REST APIs, MVC Architecture, Microservices, Design Patterns (Singleton, MVC)

Frameworks: Flask, FastAPI, Spring Boot, React, Next.js

Languages: Java, SQL, Python, C, JavaScript, TypeScript

WORK EXPERIENCE

BNP Paribas, India

Jan 2026 – Present

Application Production Support (APS) Intern – Wealth Management

- Provide production support for enterprise wealth management applications running on Amazon EKS, using Dynatrace to monitor system health and detect anomalies early.
- Resolved **300+ production incidents** with an **average resolution time of ~2 hours**, performing root-cause analysis to ensure high system availability and reliability.
- Automated repetitive operational workflows using Python and SQL, implementing data validation checks that improved processing accuracy and reduced manual effort.

Tata Motors, India

May 2025 – Jul 2025

Computer Vision Intern

- Developed an AI-based computer vision system using Python to detect welding defects, improving manufacturing quality and reducing production errors.
- Designed and implemented a real-time monitoring application with camera integration for automated defect detection and tracking.
- Built image processing workflows to analyze visual data and generate structured defect outputs for quality control.

EY with Edunet Foundation, India

Feb 2025 – Mar 2025

Full Stack Web Development Intern (MERN)

- Built a full-stack Food Delivery Web App using the MERN stack with user authentication, menu browsing, and order tracking.
- Implemented responsive UI, RESTful APIs, and real-time order management for a seamless user experience.

PROJECTS

AML Insight – Anti-Money-Laundering Investigation Platform | Python, FastAPI, XGBoost, Next.js, SQLite

[GitHub](#) | [Live Demo](#)

- Built a transaction-network platform on the IBM synthetic AML benchmark, combining an XGBoost risk model (chronological, leakage-safe evaluation), graph analytics, and explainable risk scoring to flag suspicious transactions.
- Developed an analyst workflow with alerts, account network investigation, and case management (evidence, timeline, status, CSV export); deployed the UI on Vercel and the Dockerized API on Render.

Retail Store on Amazon EKS – GitOps CI/CD | Terraform, EKS, ArgoCD, GitHub Actions, Helm, Docker

[GitHub](#)

- Provisioned AWS infrastructure (VPC, EKS Auto Mode, IAM) with Terraform and deployed a multi-service retail application (Java, Go, Node.js) with ArgoCD and an NGINX ingress.
- Set up GitHub Actions pipelines to build images to Amazon ECR and auto-update Helm tags for GitOps deployments.

AI Power Chatbot | Python, Hugging Face, LLM Integration

Student Dashboard Management System | Power BI, Dashboard Development

Spot Welding Defect Detection System | Python, Data Validation

Food Delivery App | JavaScript, React, MongoDB, API Integration

EDUCATION

C.V Raman Global University, Bhubaneswar, Odisha

Jul 2023 – Jul 2026

Bachelor of Technology in Computer Science Engineering (Data Science)

Relevant Coursework: Object-Oriented Programming (Java), Software Engineering and Agile Methodologies, Artificial Intelligence and Machine Learning, Computer Networks
